

## BPS Denture Advantages

[Ivoclar BPS premium quality dentures](#) instill confidence and provide optimum function while eating, speaking or laughing.

With sophisticated instrumentation and techniques, all your facial information is recorded to recreate the character of your smile and restore the natural contour of your lips and facial muscles.

The Facebow (Transferbow) bite registration registers, analyzes the correct height of the bite and reproduces the jaw movements. This data is then transferred to the Stratos 200 articulator, which replicates that movement of your jaw and creates your smile line.

Premium Ivoclar denture teeth are used to reflect light through several layers that mimic natural teeth. The quality materials resist wear, chipping and staining. Ivoclar Vivodent teeth, Anteris Posteris, and Vivoperl Porcelain teeth are made from high quality cross-linked acrylics and porcelains that resist excessive wear, stains, chips and breakage. This high quality material will maintain the natural shape of the teeth so that proper cutting and chewing of desired foods can be maintained.

### **State-of-the-art equipment is used to form the denture base.**

Not all dentures are fabricated using the same materials or techniques. The acrylic used for the pink tissue portion of a denture will shrink when it is processed and can cause inaccuracies in the fit of the denture to your mouth. This shrinkage can cause sore spots and movement during eating and speaking.

Fortunately a revolutionary system SR Ivocap, has been developed that completely compensates for the processing shrinkage of the denture base material. The injection technology used in the SR Ivocap system is considered the state-of-the art in denture processing.

The accuracy of the process results in a denture that will provide you with the best fit possible. You can eat, talk and smile with confidence with your SR Ivocap denture.

## SR Ivocap Advantages:

- **Comfort** – reduced irritation to the gums.
- **Strength** – extremely dense material reduces the chance of breakage
- **Cleanliness** – non porous surface greatly lessens odor causing plaque and bacteria
- **Fit** – non irritating and comfortable to wear - no denture adhesive needed
- **Health** – eat virtually any food
- **Esthetics** – natural looking so you can smile, speak and laugh with confidence

**Bio-compatible** – will not distort taste, stain, or collect odors or irritating bacteria. The result is a better fitting, more comfortable restoration that requires fewer adjustments.
